

When Latching

Cross Cradle Position for Left Breast:

- Align baby's nose so that it does not go past your nipple, or go to the left of your nipple, in other words, your nipple should not be aligned with their chin
- Place your right hand under baby's face so your four fingers make a pillow for baby's cheek (keep your four fingers tightly together as if they were stuck together with glue)
- You are now supporting the weight of baby's head with your hand
- You may want to sit baby's bottom on your arm as though it were a shelf (this will work in the beginning with a newborn)
- Or you may want to let baby's bottom fall diagonally a bit and squeeze it against your rib cage with your elbow
- Baby's body and legs should be wrapped around mother
- Pull baby's bottom into your body with the inside/underside of your forearm as if serving baby to you on a platter
- This will bring them toward your breast with the nipple pointing to the roof of their mouth
- Head supported but NOT pushed in against your breast
- In fact, try to think of it not as bringing baby's head into or near your breast at all—instead, bring baby's body into your body and the head will follow, as if serving baby to you on a platter
- Head should be tilted back slightly so the nose is up and the baby's chin is coming into the breast while the nose never touches the breast
- Use your whole arm to bring the baby onto the breast when baby's **mouth is wide**.
- Baby's chin should be far away from Baby's chest

WATCH LOWER LIP, **aim it as far from base of nipple as possible**, so tongue draws **lots of breast** into mouth. Move baby's body and head together – keep baby uncurled. If you keep your wrist straight, with baby's cheek resting on your fingers, then baby's chin will not bend down toward his chest

Once latched, baby's top lip will be close to nipple, areola shows above lip. Keep baby's chin close against your breast.

WIDE MOUTH / GAPE

Need **mouth wide before** baby moved onto breast. Teach baby to open wide/gape:

- Avoid placing baby down in a feeding position until you are completely ready to latch baby. The longer baby waits while you get ready (undoing your breast, etc.) the more frustrated baby gets, and the less open baby's mouth will go
- Move baby toward breast, touch top lip against nipple
- Move mouth away SLIGHTLY
- Touch top lip against nipple again, move away again
- **Repeat until baby opens wide** and has tongue forward
- **Or**, better yet, run nipple along the baby's **upper lip**, from one corner to the other, lightly, until baby opens wide

Move baby not breast

RECOMMENDATIONS FOR THE MOTHER

Mother's Posture

- Sit with straight, well-supported back
- Trunk facing forwards, lap flat

Baby's Position Before Feed Begins

- Nipple points to the baby's upper lip or nostril

Baby's Body

- Placed not quite tummy to tummy, but so that baby comes up to breast from below and baby's eyes make contact with mother's Support Breast
- Firm inner breast tissue by raising breast slightly with fingers placed flat on chest wall and thumb pointing up (if helpful, also use sling or tensor bandage around breast)

Move Baby Quickly on to Breast

- Head tilted back slightly, pushing in across shoulders so chin and lower jaw make contact (not nose) while mouth still wide open, keep baby uncurled (means tongue nearer breast) lower lip is aimed as far from nipple as possible so baby's tongue draws in maximum amount of breast tissue

Cautions

Mother needs to AVOID

- Pushing her breast across her body
- Chasing the baby with her breast
- Flapping the breast up and down
- Holding breast with scissor grip
- Not supporting breast
- Twisting her body towards the baby instead of slightly away
- Aiming nipple to center of baby's mouth
- Pulling baby's chin down to open mouth
- Flexing baby's head when bringing to breast
- Moving breast into baby's mouth instead of bringing baby to breast
- Moving baby onto breast without a proper gape
- Not moving baby onto breast quickly enough at height of gape
- Having baby's nose touch breast and not the chin
- Holding breast away from baby's nose (not necessary if the baby is well latched on, as the nose will be away from the breast anyway)
